

# City of Atlanta

## Rebuild Atlanta - Energy Conservation Program

### ACCOMPLISHMENTS

---

#### Energy Audit

- The Energy Conservation Program created \$500,000 savings from the result of an extensive electricity rate analysis and changes made upon the recommendations of the Rebuild Atlanta audit team.
- Reserved \$275,000 of the first year savings in the Energy Conservation Reinvestment Account (ECRA), a fund dedicated to implementing cost-effective energy conservation capital projects.

#### Utility Management System

- The Energy Conservation Program is purchasing specialized software to monitor Atlanta's 700+ electricity accounts and 150 natural gas accounts to benchmark performance and to alert facility managers to potential energy waste and publicize the City's efforts.

#### Training and Workshops

- The Energy Conservation Program is providing HVAC training for facility managers and workshops for water and wastewater plant managers to implement best management practices regarding operations, maintenance and energy conservation at existing facilities.

#### Green Building and LEED Education

- The Energy Conservation Program provided education, resources and information to the Atlanta Fire Department project manager on green building as an important component for new City fire stations.
- Four new fire stations are currently in the design/construction phase and will be seeking LEED (Leadership in Energy Efficient Design) Silver certification from the U.S. Green Building Council (USGBC).
